Due to security matters no pictures are available at this time. C130s pictured.

Description of the Project:

This project is the construction of a new C130J Maintenance Training Facility at the Little Rock Air Force Base. The new one story facility will consist of 3,130 square meters. The building consists of a wing containing the simulator bays and support areas. The other wing of the building includes the teaching/administration areas and other support areas. Site development on the project includes new parking, driveways, sidewalks, lighting, landscaping, and new perimeter service drive. The new building will have electrical, fire protection/detection, lightning protection, seismic protection, communications services, and other support infrastructures. Demolition of the overhead and underground utilities is required to prepare the site for the new facility.
